AL-2 can also be used for wound healing, i.e. accelerating neovascularisation of, e.g. burns and ulcers. The encoding nucleic acids are useful in preparing antibodies that specifically bind to the AL-2 protein. The antibodies and the AL-2 antagonists are useful in diagnosing and treating various neuronal disorders. AL-2 antagonists can be used for modulating angiogenesis. They can also be used for the treatment of tumours, acute myeloid leukaemia (AML), chronic myeloid leukaemia (CML), myelodysplastic syndrome (MDS), diabetic retinopathy, neovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ischaemia, infection, metabolic disease, nutritional deficiency, malignancy, or toxic agents, to promote the survival or growth of neurons. They can be used to treat motoneuron disorders such as amyotrophic lateral sclerosis (Lou Gehrig's disease), Bell's palsy, and various conditions involving spinal muscular atrophy, or paralysis. AL-2 can be used to treat human neurodegenerative disorders, such as Alzheimer's disease, Parkinson's disease, epilepsy, demyelinating diseases such as multiple sclerosis, Huntingtons chorea, Down's syndrome nerve deafness, Menier's disease, and other disorders of the cerebellum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human AL-2 neurotrophic factor and related DNA - used to develop products for, e.g. treating neurologic disorders, angiogenesis disorders, tumours or rheumatoid arthritis or for wound healing

ANASTANA
AN
This protein sequence comprises a novel human cytokine designated Lerk-8. The amino acid sequence was deduced from a human foetal brain cDNA clone (see AAT89519). Lerk-8 binds to the cell surface receptors hek and elk, which are members of the eph/elk family of polypeptides comprising amino acid residues -27 to 142-197 of the cell surface polypeptides comprising amino acid residues -27 to 142-197 of the cell length protein, can be expressed in transformed host cells. These polypeptides can be used to purify hek or elk proteins, and to purify or identify cells that express hek or elk proteins, and to purify or neural cells expressing elk can be aufface. Such cells can be used in various in vitro studies or in vivo procedures, e.g. neural cells expressing elk can be administered to a mammal afflicted with a neurodegenerative disorder. The Lerk-8 collypeptides can also be used to deliver diagnostic or therapeutic agents to these cells (e.g. leukaemia cells). The Lerk-8 DNA and collypeptides can also be used to: treat disorders mediated by collypeptides can also be used to: treat disorders mediated by collypeptides can also be used to flerk-8; to treat disorders such as injury to neural tissue or neurologic disease; to promote such as injury to neural tissue or neurologic disease; to promote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 1997-503043/46.

It is encoded by a cDNA clone (AAT60966) obtd. from a human foetal brain cDNA library. The novel receptor ligand can be expressed in transformed host cells and used in methods for regulating the development, maintenance or regeneration of different cells (e.g. neurons) and tissues in vivo and in vitro. Soluble NLERK2 peptides can be used to treat injury, disease or abnormality in the nervous system, and membrane-bound NLERK2 to modulate proliferation, different or survival e.g. in grafting procedures or transplantation. NLERK2 can also be used to raise antibodies for use in immunotherapy, and to detect anti-NLERK2 antibodies that may occur in some autoimmune diseases.

Its amino acid sequence was deduced from a human frontal cortex cDNA clone (AAT69808). Recombinant Elf-6, truncated soluble polypeptides comprising the extracellular domain of Elf-6, and Ef1-6 ligandbodies comprising soluble Ef1-6 and the Fc portion of IgG can be expressed in host cells. These can be used to support neuronal and other Eph receptor-bearing cell populations for treatment of neurological disorders, in drug screening and to raise diagnostic
                                                                                                                                                                                                                                                                                                                                                                                       Sequence

CC ischaemia, infection, metabolic disease, nutritional deficiency, cc malignancy, or toxic agents, to promote the survival or growth of ce neurons. They can be used to treat mctoneuron disorders such as ceresis (Lou Gehrig's disease), Bell's palsy, and can be used to treat mctoneuron disorders such as conditions involving spinal muscular atrophy, or paralysis. AL-2 can be used to treat human neurodegenerative disease, such as continuous conditions involving spinal muscular atrophy, or paralysis. AL-2 can be used to treat human neurodegenerative disorders, such as comerve deafness, Menier's disease, and other disorders, such as conerve deafness, Menier's disease, and other disorders of the cerebellum. Cc AL-2 can be used as cognitive enhancer, to enhance learning particularly in dementias or trauma, since they can promote axonal outgrowth and synaptic plasticity, particularly of hippocampal neurons that express Cc AL-2 binding Eph-family receptors and cortical neurons that express AL-2 binding Eph-family receptors and cortical neurons that express Cc AL-2 binding Eph-family receptors and cortical neurons that express Cc AL-2 and also be used for wound healing, i.e. accelerating conditions and the AL-2 antagonists are useful in diagnosing are useful in preparing antibodies that specifically bind to the AL-2 conditating various neuronal disorders. AL-2 antagonists are useful in diagnosing conditating angiogenesis. They can also be used for the treatment of tumours, acute myeloid leukaemia (AML), chronic myeloid leukaemia (CML), cmyelodysplastic syndrome (MDS), diabetic retinopathy, neovascular conditions and rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human AL-2 neurotrophic factor and related DNA - used to develop products for, e.g. treating neurologic disorders, angiogenesis disorders, tumours or rheumatoid arthritis or for wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AL-21; AL-2; AL-2-long; human; treatment; neurological disorder; tumour; rheumatoid arthritis; wound healing; paralysis; angiogenesis; leukaemia; psoriasis; Alzheimer's disease; epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tyrosine kinase receptor ligand. AL-2 can be administered to patients whom the nervous system has been damaged by trauma, surgery, stroke, ischaemia, infection, metabolic disease, nutritional deficiency, malignancy, or toxic agents, to promote the survival or growth of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; AAV06354.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC This polypeptide comprises human Elk-L3, a transmembrane ligand of CC Elk-related receptor tyrosine kinase (ERRTK). A novel method of CC modulating the biological activity of, or for affecting a pathway CC regulated by, a transmembrane ligand for an ERRTK in a cell C expressing the transmembrane ligand for an ERRTK in a cell C expressing the transmembrane ligand for an ERRTK, or an isoform CC or an extracellular domain of the ERRTK, and the transmembrane CC ligand expressed on the cell. The complex can also be used for CC evaluating a substance for its ability to modulate the biological CC evaluating a substance for its ability to modulate the biological CC evaluating a substance for its ability to modulate the biological CC evaluating a substance for its ability to modulate the biological CC evaluating a substance for its ability to modulate by a ERRTK. CC A purified and isolated oligomerised ERRTK can be used in the CC preparation in a subject, or in a medicament for modulating neuronal development or cregeneration in a subject, or in a medicament for modulating conducting can be used to modulate axonogenesis, nerve cell convolving trauma and injury to the nervous system, such as convolving trauma and injury to the nervous system, such as convolving trauma and injury to the nervous system, such as convolving trauma such is part to the nervous system, deficiency diseases, such as multiple sclerosis, amyotrophic CC lateral sclerosis, bacterial and viral infections of the nervous system, deficiency diseases, such as wernicke's disease and conditions convolving trauma such is part to the nervous and infections of the nervous system, deficiency diseases, such as wernicke's disease and conditions convolving to the nervous system, such as mand infections of the nervous system, deficiency diseases, such as wernicke's disease and conditions of the nervous convolving trauma conditions of the nervous system deficiency diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

It is important in cellular communication during pattern formation. Its amino acid sequence was deduced from a cDNA clone (AAT40230) isolated from a newborn mouse brain cDNA library. The ELF-2 ligand can be used to alter neurological development, oncogenesis and growth regulation, to modulate binding of ELF-2 to the Eph receptor, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eph receptor ligand, ELF-2, and DNA encoding it - used to prevent neurological diseases, and to modulate binding of Eph receptor, e.g. to prevent or treat tumour formation.

specific typing (partic. as a marker for breast cancer) and as a
marker for human chromosome 13. The ligands (partic. in soluble
form) are used to activate the tyrosine kinase domain of the
Htk receptor, i.e. to stimulate or inhibit growth, differentiation,
and/or activation of cells conty. the receptor, e.g. treatment
of neurodegenerative diseases, since they are strongly expressed
in the cerebral cortex, hippocampus, striatum and cerebellum.
The ligands are also useful as a control or standard in assays,
for generation of antibodies, as a mol. wt. marker, for growth
in vitro of Htk-receptor positive cells, as research agent,
in screening, etc.

The present sequence is the human cytokine elk-ligand (elk-L), which binds a member of the tyrosine kinase receptor family. Elk-L exhibits neurotrophic and neuroprotective properties, and has a calculated mol. wt. 35180 daltons and a pI of 9.006. The elk-L cDNA, isolated from a human placental cDNA library, can be radiolabelled and used as a probe for isolating other mammalian elk-L cDNA. Elk-L can be used to treat neural tissue disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of the human elk-L protein, a new cytokine that is the ligand for the elk tyrosine kinase receptor. The extracellular domain of the protein (amino acids 1-213) is used to generate a fusion protein comprising the rc polypeptide of the human immunoglobulin G1 (extending from the hinge region to the C-terminus). The fusion protein (which has the same activities as the natural elk-L protein) has neuroprotective and neurotrophic activity so is potentiall useful for treating a wide range of neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Soluble fusion proteins of human elk-ligand fragment - and their dimers and oligomers, uneuro-protectants and neurotrophic agents

                                                                                                                                                                                                                                                           The present sequence is a human elk ligand (elk-L) protein, which binds elk, has a calculated molecular weight of 35180 and an isoelectric point of 9.006. Blk-L is a cytokine that can be used to test cells for elk expression, measure the biological activity of elk, purify elk by affinity chromatography and as a neuroprotective agent to treat diabetic, hereditary and nutritional neuropathies and neurodegenerative diseases. It may also be added to tissue cultures to prolong the life of neurons. The elk-L cDNA was isolated from a human placental cDNA library, and is present as a cDNA insert in the recombinant vector deposited in strain
                                                                                                                                                                                                                                                                                                                                                                                                                           Human elk ligand protein - as neuro-protective agent

                                             The present sequence represents human elk-L (elk ligand). The present invention describes antibodies to elk-L polypeptides. The elk-L protein is known to be neuroprotective exhibiting its effect through a trophic mechanism. Examples of diseases that may be treated with elk-L include neuropathies e.g. diabetic, hereditary and mutritional neuropathies, neurodegenerative diseases and other diseases characterised by loss of function or degeneration of neurons.

It has homology with B61 (Ef1-1) and Ef1-2. Ef1-3 appears to comprise a conventional transmembrane protein with a cytoplasmic domain. Ef1-3 is useful for identifying other ligands for Ehk-1, -2, -3, Eck and Elk receptors. The ligands are useful in promoting a differential function and/or influencing the phenotye, such as growth and/or proliferation, of receptor bearing cells. They may be used in the diagnosis, and treatment of neurological disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents the full length receptor-type tyrosine kinase protein binding ligand of the invention (also see AAW06333 and AAW06334). The mature protein contained within this sequence contains the N-terminal fragment represented by AAW06332. The proteins of the invention have a molecular weight of 23500 (plus or minus 1500) Da, and are positive for Coomassie staining and PAS staining. The proteins of the invention bind to the fragment of this protein sequence represented by AAW06330. The proteins of the invention are new ligands of receptor-type tyrosine kinases, and can be prepared by standard

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A ligand polypeptide which binds to the extracellular part of a specific receptor-type tyrosine kinase and induces phosphotylation of tyrosine within the cell can be used in the study of the differentiation of blood cells such as the haematopoietic stem cells; of disease processes such as leukaemia, and of the biology of bone marrow transplantation. The ligand plays a role in the differentiation process and the specific ligand target is expressed in the specific ligand target is expressed to the specific ligand target target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ligand peptide binding intracellular tyrosine undifferentiated blood
 Hepatoma transmembrane kinase;
                                 Human hepatoma transmembrane kinase receptor ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      22-DEC-1994;

The DNA is used to produce recombinant ligands, for tissue-
specific typing (partic. as a marker for breast cancer) and as a
marker for human chromosome 13. The ligands (partic. in soluble
form) are used to activate the tyrosine kinase domain of the
Htk receptor, i.e. to stimulate or inhibit growth, differentiation,
and/or activation of cells contg. the receptor, e.g. treatment
of neurodegenerative diseases, since they are strongly expressed
in the cerebral cortex, hippocampus, striatum and cerebellum.
The ligands are also useful as a control or standard in assays,
for generation of antibodies, as a mol. wt. marker, for growth
in vitro of Htk-receptor positive cells, as research agent,
in screening, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               activate, the Htk receptor, have been identified in a variety of tissues using a soluble Htk-Fc fusion protein. The predicted mol.wt. of the murine Htk ligand protein following signal peptide cleavage is 34 kD with an estimated pI of 8.9. The protein and human ligands show 96% homology at the amine level.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ligand for the hepatoma trans-membrane kinase receptor - useful stimulating and inhibiting cells carrying the receptor, e.g. for treating neuro-degenerative disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 6; Fig 2(A-B); 88pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ocal
                                                                    sapiens
```

```
The sequence represents a full-length LERK-5 cytokine, which binds elk and hek receptor protein-tyrosine-kinases (members of the eph/elk family), and expressed from a gene isolated by amplification with primers specific for a chromosome-13 expressed sequence tag, GenBank L13189, from a human T-lymphocyte leukaemia CCRF-HSB-2 (ATCC CCL L10.1) cell line, followed by cDNA probe screening of a human fetal brain cDNA library in phage lambda-gtl0. A truncated soluble form may also be produced. The protein may be produced as a recombinant fusion protein or dimer with an antibody Fc fragment or e.g. a FLAG affinity tail (R89288). LERK-5 may be used in binding assays to detect elk- or hek-expressing cells, to measure elk or hek activity, as a drug delivery for elk or hek receptor-specific cell therefore, e.g. for delivery of cytostatic agents in leukaemia
Receptor-type tyrosine kinase; LPM medium; ligand; autophosphorylation; insect cell; animal cell; growth promoter; undifferentiated cell; insulin; interleukin; fibroblast growth factor; hepatocyte growth factor; nerve growth factor; interferon-gamma; tumour necrosis factor; inducer.

These sequences are included in the LPM medium of the invention. The medium is used to culture cells capable of producing a ligand for receptor-type tyrosine kinase. The ligand serves as a physiologically active substance to induce enzyme activity and autophosphorylation of tyrosine kinase, which is involved in the development and differentiation of animal and insect cells. The ligand can also be used as in a pharmaceutical preparation for promoting growth of undifferentiated cells. The medium may also include an inducer, such as insulin, an interleukin, a fibroblast growth factor, or interferon-gamma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW06333 and AAW06334 represent receptor-type tyrosine kinase receptor binding ligands of the invention. These sequences both have the N-terminal sequence represented by AAW06332. The ligands of the invention recognise the fragment of the receptor type kinase receptor represented by AAW06330 (see AAW06331 for full length sequence). The proteins of the invention have a molecular weight of 23500 (plus or minus 1500) Da, and are positive for Coomassie staining and PAS staining. The protein is a new ligand of receptor-type tyrosine kinases, and can be prepared by standard recombinant techniques.

The ligand plays a role in the differentiation process and the specific ligand target is expressed in undifferentiated blood cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22-DEC-1994;

The patent discloses a complex comprising of a B class ephrin and PDZ domain containing protein. B class ephrins function as ligands for Eph receptor tyrosine kinases (RTK) and possess a transmembrane element and a highly conserved cytoplasmic tail at the C-terminus, that contains a PDZ binding site. This complex is used in methods to modulate the interaction of a B class ephrin and PDZ domain containing protein and to identify modulator compounds. It is also used for modulating cellular processes like, axonogenesis, nerve cell interactions and regeneration of nerve cells. The complex is also useful for treating proliferative or differentiative disorders associated with this protein complex. The present sequence is the human ephrin B C-terminal cytoplasmic domain, comprising conserved sequences reminiscent of known or predicted binding sites for PDZ domains. Ephrin B3 is also known as NIERK-2, EIK-13, EFL-6, EIF-3 and LERK-8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
production of homogenous forms of clustered ligands is broadly applicable to improve the affinity and/or increase the activity of a ligand as compared to the native form of the ligand. Ephrin fusion proteins have been constructed, which may be useful for treating neurological disorders. The ephrin fusion proteins are preferably capable of binding to Elk receptor and are especially Efl-6 antagonists. The fusion proteins were constructed after it was demonstrated that similar improved activities could be achieved using Tie-2 receptor ligands. Angiopoletin-1 (Ang-1) is a Tie-2 receptor ligand and is an agonist for Tie-2, whereas angiopoletin-2 (Ang-2) is a naturally occuring antagonist of the Tie-2 receptor. The fibrinogen domains (FD) of Ang-1 and Ang-2 are the receptor-binding domains and dimerized versions, of e.g. Ang-1-FD-Fc
                                                                                                                                                                                                                              Polynucleotide encoding a fusion polypeptide, useful for promoting differential function and influencing phenotype, comprises two subunits containing at least one copy of the receptor binding domain of a ligand
                                                                                                                                                                                                                                                                                                N-PSDB; AAA51346.
                                                                                                                                                                                                                                                                                                                                           Davis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (Ang-1 fibrinogen domain fused to an Fc domain), can bind to the Tie-2 receptor with much higher affinity than monomeric Ang-1-FD (dimerization occurs between the Fc components of adjacent molecules). However, Ang-1-FD-FC is not able to induce phosphorylation (activate) the Tie-2 receptor on endothelial cells unless it is further clustered with goat anti-human Fc antibodies. The novel fusion proteins, mutant versions of Ang-1-FD and Ang-2-FD, were designed that were intrinsically more highly clustered. Tie-2 agonist fusion proteins may be used as haematopietic factors. Tie-2 receptor antagonist fusion proteins may be used to diagnose or treat, e.g. myeloproliferative or other proliferative disorders of blood forming organs, e.g. thrombocythemias, polycythemias
                                                                                                                                                                                                                                       Ephrin-B1;

                                                                                                                                                                                                                                                                                                                                  CC to improve the affinity and/or increase the activity of a ligand as compared to the native form of the ligand. Ephrin fusion proteins have been constructed, which may be useful for treating neurological CC disorders. The ephrin fusion proteins are preferably capable of binding to El Rivertine after it was demonstrated that similar improved activities could be achieved using Tie-2 receptor ligands. Angiopoietin-1 (Ang-1) is a Tie-2 receptor ligand and is an agonist for CC activities could be achieved using Tie-2 receptor ligands. Angiopoietin-1 (Ang-1) is a Tie-2 receptor ligand and is an agonist for CC fie-2, whereas angiopoietin-2 (Ang-2) is a naturally occurring antagonist cof the Tie-2 receptor. The fibringen domains (PD) of Ang-1 and Ang-2 are the receptor binding domains and dimerized versions, of e.g. Ang-1-PD-FC (Ang-1 fibringen domain fused to an Fc domain), can bind to the Tie-2 receptor with much higher affinity than monomeric Ang-1-FD (dimerization occurs between the Fc components of adjacent molecules). However, creeptor on endothelial cells unless it is further clustered with goat anti-human Fc antibodies. The novel fusion proteins, mutant versions of Ang-1-FD and Ang-2-FD, were designed that were intrinsically more highly CC clustered. Tie-2 agonist fusion proteins may be used to collegnose or treat, e.g. myeloproliferative or other proliferative and lighterials of and lenkemias.

Extracellular region of an Eph B receptor is capable of binding with high affinity to a mammalian ephrin B ligand is capable of binding with high affinity to a mammalian ephrin B ligand is capable of binding with high affinity to a mammalian Eph B receptor. The nucleic acid encoding the polypeptides or the polypeptides are useful for producing pharmaceutical compositions for treating a tumour disease or ocular necvascularisation in mammals, including humans. The vector is useful in producing a pharmaceutical composition for treating the diseases cited above in mammals, particularly humans, by means of gene therapy. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New soluble polypeptides of the extracellular region of the Eph B receptor and ephrin B ligands, useful in gene therapy for treating a tumor disease or ocular neovascularization in mammals, including humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (NOVS)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to new isolated soluble polypeptides comprising an amino acid sequence of an extracellular region of an Eph B receptor or an amino acid sequence of an ephrin B ligand, or essentially similar amino acid sequences of extracellular region of an Eph B receptor or an amino acid sequences of extracellular region of an Eph B receptor is capable of binding with high affinity to a mammalian Ephrin B ligand is capable of binding with high affinity to a mammalian Ephrin B ligand is capable of binding with high affinity to a mammalian Ephrin B neceptor. The nucleic acid encoding the polypeptides or the polypeptides are useful for producing pharmaceutical compositions for treating a tumour disease or ocular neovascularisation in mammals, including humans. The vector is useful in producing a pharmaceutical composition for treating the diseases cited above in mammals, particularly humans, by means of gene therapy. The present sequence is human ephrin B2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New soluble polypeptides of the extracellular region of the Eph B receptor and ephrin B ligands, useful in gene therapy for treating a tumor disease or ocular neovascularization in mammals, including humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SAON)

                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW06333 and AAW06334 represent receptor-type tyrosine kinase receptor binding ligands of the invention. These sequences both have the N-terminal sequence represented by AAW06332. The ligands of the invention recognise the fragment of the receptor type kinase receptor represented by AAW06330 (see AAW06331 for full length sequence). The proteins of the invention have a molecular weight of 23500 (plus or minus 1500) Da, and are positive for Coomassie staining and PAS staining. The protein is a new ligand of receptor-type tyrosine kinases, and can be prepared by standard recombinant techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Receptor-type tyrosine kinase; ligand; coomassie staining; PAS staining;

These sequences can be included in the LPM medium of the invention. The medium is used to culture cells capable of producing a ligand for receptor-type tyrosine kinase. The ligand serves as a physiologically active substance to induce enzyme activity and autophosphorylation of tyrosine kinase, which is involved in the development and differentiation of animal and insect cells. The ligand can also be used as in a pharmaceutical preparation for promoting growth of undifferentiated cells. The medium may also include an inducer, such as insulin, an install the medium may also include an inducer, such as insulin, an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to single exon nucleic acid probes (SENP: see ARI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placents. The probes are useful for antenatal diagnosis of
Human; single exon probe; asthma; lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 27; SEQ ID No 37940; 654pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful analyzing gene expression in human placenta -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-SEP-2000;

CC The invention relates to a spatially-addressable set of single exon concluded aridy probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of complements or the 12387 open reading frames derived from the 1264 probes, the notel set of probes which hybridise at high stringency to a collectic acid expressed in the human lung; measuring gene expression in a complement of expressed in the human lung; measuring gene expression in a concluded are a microarray comprising the novel set of probes, the novel set of probes which hybridise at high stringency to a collection of detectably labeled nucleic acids derived from human lung; measuring gene expression in a concluded acid expression in a concluded acid expression of feetectably labeled nucleic acids derived from human lung measuring (a) contracting the array with cof the entray; identifying exons in a eukaryotic genome, comprising cof the entrayet, and (b) measuring the label detectably bound to each grobe of the entrayet, and (b) detecting specific hybridisation of detectably cof the entrayet, and (b) detecting specific hybridisation of detectably comprising exons from genomic sequences of the expression of the exons in the predicted exon, the probe is included comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising one to a single exon probe with the exon, where a common pattern of the exons should be assigned to a single exon, the probes are used for gene that the transmitted of the exons in a serie that the transmitted probable comprising one conditions the probable of the exons in series that the probable of the exons in series and the probable of the exons of the exons in the probable of the e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histicoytosis; lymphangicleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis, fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  30-JUN-2000;

           such probe. The probes are useful for producing a microarray for producting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ŕ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 mucleic acid sequences mentioned in the specification, or their complements or the 1287 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a conlection of detectably labeled nucleic acids derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) indicating sequences of the eukaryote; and (b) detecting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-FEB-2000;

B class ephrins function as ligands for Eph receptor tyrosine kinases (RTK) and possess a transmembrane element and a highly conserved cytoplasmic tail at the C-terminus, that contains a PDZ binding site. This complex is used in methods to modulate the interaction of a B class ephrin and PDZ domain containing protein and to identify modulator compounds. It is also used for modulating cellular processes like, axonogenesis, nerve cell interactions and regeneration of nerve cells. The complex is also useful for treating proliferative or differentiative disorders associated with this protein complex. The present sequence is the human ephrin BZ C-terminal cytoplasmic domain, comprising conserved sequences reminiscent of known or predicted binding sites for PDZ domains. Ephrin B2 is also known as Htk-L, ELF-2, LERK-5 and NLERK-1.
